

THINAIR

We take great pleasure in announcing that Mike Lennon and WhiteFormula have agreed a deal for the transfer of ownership of the Thinair Moth project to WhiteFormula. We feel this will benefit the project, as WhiteFormula will have greater control over the build process whilst utilising Mike's expertise in the sailing and development aspect of the project. Mike Lennon and Dave Hollom will continue to take part in the ongoing development.

New Platform

The Thinair V2 is our new flagship model, utilizing the most modern materials. We have now upgraded to a fully pre-preg hull construction using high modulus and ultra-high modulus carbon fibre. This maintains structural integrity whilst vastly lowering hull weight. We continue this approach throughout the build including the wing bars, gantry and foils, all now produced using state of the art processes and cured at a high temperature using our in-house oven.

Although much of this is unseen there are subtle visual changes. The new trampoline tubes are designed to allow easy movement of mainsheet positions to accommodate the newer generation of deck sweepers. We have worked closely with market leaders in carbon manufacturing to develop a new spread toe cloth to use on the deck to improve the performance of the hull. There are other slight changes that would be noticed if closely inspected. These include a new bowsprit design, prodder spec, re designed king post mount and a new tougher paint.

New faces

The guru of boat building, Olympian Rob White alongside Henry and Thom White have a wealth of experience. Between them they have vast capabilities in R&D, CNC, CAD, pre-preg and infusion just to name a few.

It is great to welcome Eddie Bridle to the White Formula Thinair Team. Eddie has been sailing foiling boats since the age of 13 and has placed highly at world class events. Eddie has become a Thinair Team rider and is continually testing and developing in this ever-evolving fleet. Eddie will balance being active on the moth circuit while attending to customer-based services.

Our Goal

Our goal is to produce the Thinair Moth to the highest standards. The boat must work straight out of the box for all, not just the elite, whilst holding no sailor back to achieve top world ranked results.

We will continuously push the boundaries of innovation without compromise, ensuring all modifications will be easily retro fitted to any Thinair, keeping the boat competitive for longer.

Customer service will be a priority within the Thinair Team, as we will strive for quick turn arounds, accessible service and reliable delivery. This is all helped by WhiteFormula having a large production line with high staff numbers, and a working factory of over 7500 sq FT. This gives us the capabilities to meet high demand. This factor is key to achieving our goals in making the world's best Moth without long lead times.
